

SMIT ROY | JAVA BACKEND DEVELOPER

KOLKATA, INDIA | (+91) 62899 68445 | smitroy22@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend Developer with 2.5+ years of professional experience building and maintaining Java/Spring applications and REST APIs across 8+ client projects. Strong hands-on experience with Spring Boot, JPA/Hibernate, Spring Security, PostgreSQL/MySQL, Docker, microservices, and cloud deployment, complemented by production-grade independent personal projects.

TECHNICAL SKILLS

Languages: Java (OOP, Collections, Streams, Lambdas, Optional, Multithreading, Exception Handling), SQL
Frameworks & Libraries: Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Hibernate, Spring Security, Spring Cloud, Spring Boot Actuator, Resilience4j, JWT
Databases & Messaging: PostgreSQL, MySQL, Redis, Kafka
Cloud & DevOps: AWS, Oracle Cloud (OCI), Docker, GitHub Actions, Render, Railway
Testing & Tools: JUnit, Mockito, Maven, Git, GitHub, Postman, Swagger/OpenAPI, IntelliJ IDEA, DBeaver
Concepts: RESTful Web Services, Microservices Architecture, Distributed Systems, JWT, OAuth, Data Structures, Concurrency

OPEN SOURCE

JWT STARTER DEPENDENCY FOR SPRING BOOT | [jwt-spring-boot-starter](#) - [GitHub \(1.0.2\)](#)

May 2026

- Built a reusable JWT authentication starter for Spring Boot with auto-configuration and zero boilerplate setup
- Implemented **JwtService**, **JwtAuthenticationFilter**, and **SecurityFilterChain** as auto-configured beans with **@ConditionalOnMissingBean** for full extensibility
- Published to **GitHub Packages** (75+ *GitHub stars*) with Maven and an automated CI/CD pipeline using **GitHub Actions**

MAJOR PROJECTS

CIRCUITMART | E-Commerce Microservices - [GitHub](#)

June 2026 - Present

- Built a cloud-native e-commerce backend with 5 independently deployable Spring Boot microservices (**Eureka Discovery Server**, **Config Server**, **API Gateway**, **Inventory Service**, **Order Service**), designed around Spring Cloud components and distributed-system patterns
- Implemented centralized, **environment-specific configuration management** via Spring Cloud Config Server, supporting **runtime property refresh** through Spring Boot Actuator's RefreshScope
- Designed **hybrid inter-service communication** for Order-Inventory workflows: **synchronous** OpenFeign calls guarded by Resilience4j
- Secured the API Gateway with JWT-based authentication and custom Spring Cloud Gateway filters to enforce **stateless authorization**.

STAYGRID | Hotel Rental Booking Backend - [Render](#) | [GitHub](#)

March 2026 - July 2026

- Designed and developed a scalable backend system for **property listings** and **bookings** using Spring Boot
- Implemented **JWT-based authentication** with refresh tokens and role-based access control (**GUEST / HOTEL_MANAGER**)
- Developed booking logic with **date conflict resolution** and **transactional workflows**, preventing overlapping reservations across 365 days of forward inventory per room
- Applied **DTO pattern**, **global exception handling**, and standardized API responses for a maintainable and consistent architecture
- Integrated Redis **caching for hotel and room search results** to reduce database load on read-heavy endpoints; used **@CacheEvict** to maintain cache consistency on all hotel updates.
- Implemented **dynamic hotel pricing** using the **Decorator Pattern** with layered surge, occupancy, and urgency-based adjustments.
- Integrated **Stripe payment gateway** with webhook-based confirmation and automated refund handling for cancelled bookings
- Implemented concurrency control using **pessimistic locking** and a multi-state inventory system (reserved - confirmed - cancelled)
- Containerized the application with Docker and deployed it on **Render** with PostgreSQL deployed on **Neon Serverless Postgres**

PROFESSIONAL EXPERIENCE

TASK VIRTUAL SERVICES

Kolkata, India

Associate

March 2024 - Present

- Developed and maintained backend applications and REST APIs across 8+ production systems (real estate, healthcare, salon, pipe/ceiling manufacturing, retail, repair billing, and internal systems), implementing business logic, API workflows, database integrations, validations, and feature enhancements, with Dockerfiles used to containerize applications for deployment.
- Built and enhanced new and legacy admin-facing web applications, developing backend functionality across Spring MVC/Thymeleaf and legacy Spring-based codebases, with supporting frontend exposure in HTML, CSS, JavaScript, React, and WordPress for backend integration.
- Managed application databases and administrative tasks, including database modifications, data validation, troubleshooting, data cleanup, and managing CMS-based applications, while improving data quality and system usage.
- Participated in client meetings and requirement discussions, translated business requirements into development tasks, demonstrated completed features, incorporated feedback, and supported projects through development, testing, UAT, deployment, and production support.
- Assisted with application deployment and production troubleshooting across cloud/server environments, including Oracle Cloud (OCI), Railway, and AWS for one project, investigating application, database, configuration, and runtime issues.
- Developed AI-powered automations for data processing, information extraction, reporting, and repetitive operational workflows.

EDUCATION

CHANDIGARH UNIVERSITY

Punjab, India

Master of Computer Applications (MCA)

July 2025 - Expected August 2027

Specialization: Cloud Computing | AWS Cloud Practitioner Essentials Certified

Current Cumulative GPA: 9.10
